

Introducing our NEWLY-DESIGNED RRFB Lightbar

JSF Technologies is proud to announce the release of its newly-designed RRFB Lightbar to the global ITS market, effective immediately.

The **NEW & IMPROVED** RRFB Lightbar from JSF Technologies

This reimagined RRFB Lightbar includes subtle improvements to the lightbar housing, providing added strength and durability while reducing the installation footprint with a slimmed-down frame.

Please note: Older versions of the RRFB Lightbars will be available for knock-down replacements, for a limited time, in order to provide system uniformity. Also, lightbar connections and mounting will be identical to earlier versions.

Previous Design

NEW Design

Let's break it down. What's **NEW** with our RRFB Lightbar

1. We've rotated the tell-tale LEDs on the ends to increase visibility and changed to clear lenses for improved uniformity.
2. Main front LEDs have been upgraded to provide an improved beam spread, and the mounting has now become static, allowing for increased durability, visibility, and reduced configuration time.
3. A slimmer profile provides a cleaner, more modern look and minimized installation footprint.
